LÊ ANH KHOA

GAMEPLAY DEVELOPER

Da Nang, Vietnam | +84 902 227 358 | leanhkhoapl178@gmail.com
lekhoa178.github.io/online-portfolio | GitHub | LinkedIn

Gameplay Developer with 2+ years of professional experience developing gameplay features, building UI and adding controller support, and delivering live game updates from implementation through release.

Professional Experience

RIVRS GAMES
Roblox Game Developer Oct 2025 - Present

- Maintained **Push and Slide!** as sole developer after acquisition (Oct-Dec 2025), when the game typically had about 500 concurrent players.
- Owned weekly Luau updates from implementation through release, adding in-game buying and selling features, maps and bug fixes; playtested changes in a separate development place.
- Led development of **Villains Card Collection** from scratch in Luau, implementing the core loop of earning cards and coins, buying cards and upgrading the collection.
- Implemented missions, challenges and enemy mobs for **Parkour Hunter**, a monster-hunting game targeting AAA-quality gameplay, developed in partnership with Garena; enhanced combat game feel by synchronizing hit reactions, damage events and audiovisual feedback to strengthen perceived impact and combat readability.
- Contributed to gameplay development across numerous additional Roblox game projects.

ATHER LABS
Game Engineer Jul 2024 - Oct 2025

- Implemented interactive gameplay objects for **Sipher Odyssey** in Unreal Engine using C++ and Blueprints, including interaction conditions, state changes and UI feedback.
- Refactored a UI system originally built without gamepad support, adding controller navigation and focus handling while preserving its visual design.
- Built gameplay and menu UI connected to game state, and contributed to gameplay controller support.
- Added analytics events for UI interactions and gameplay inputs to support funnel analysis.

RIKAI TECHNOLOGY
Game Developer Feb 2024 - May 2024

- Developed VR gameplay and input handling for a Unity medical-examination game, including level implementation and UI integration.

Technical Skills

Languages & Scripting: C++, C#, Luau, Blueprints
Engines & Tools: Unreal Engine, Unity, Roblox Studio, Blender
Gameplay Development: Multiplayer systems, UI and controller input, event-driven architecture, procedural animation, live game updates

Selected Projects

Pinball | Solo project | Unity, C# 2026 - In development

- Built custom ball simulation with movement integration, collision handling and bounce responses, plus enemy behaviors and a boss encounter.
- Implemented procedural animation and real-time enemy mesh deformation for a juicy, bouncy feel.

Mochi Park | Prompt To Play Game Jam | Unity, C# 2026

- Implemented grid placement, stall influence and visitor simulation using ScriptableObjects and an event bus.
- Added footprint, occupancy and path-blocking validation; published a playable HTML5 build in under one week as part of a two-person team.

Education

Da Nang University of Science and Technology 2021 - 2025
Information Technology | GPA: **3.80/4.00**

English: TOEIC Listening & Reading **870/990**; professional communication with international teams
